I'm also curious as to why cpanel is supported, but Plesk isn't. When attempting to run almaconvert8 on a Plesk server the result is:

Conversion aborted: Software unsupported by AlmaLinux 8 detected: Plesk
Please contact the software vendor and request AlmaLinux 8 support

And yet, Plesk does support AlmaLinux 8:

<https://support.plesk.com/hc/en-us/articles/12377014593303-Does-Plesk-support-AlmaLinux-as-an-alternative-to-CentOS-8->

Plesk also has a script to handle this here: <https://github.com/plesk/centos2alma>
