Trying to install vzdeploy8 won't seem to work on OpenVZ 7:

```
# yum install vzdeploy8
Loaded plugins: fastestmirror, openvz, priorities, product-id, search-disabled-repos, vzlinux,
yum-plugin-rk-repo
Loading mirror speeds from cached hostfile
* openvz-os: ftp.nluug.nl
* openvz-updates: ftp.nluug.nl
276 packages excluded due to repository priority protections
Resolving Dependencies
--> Running transaction check
---> Package vzdeploy8.noarch 0:1.0.62-1.vl7 will be installed
--> Processing Dependency: vztt >= 7.1.5 for package: vzdeploy8-1.0.62-1.vl7.noarch
--> Finished Dependency Resolution
Error: Package: vzdeploy8-1.0.62-1.vl7.noarch (virtuozzlinux-base)
    Requires: vztt >= 7.1.5
    Installed: vztt-7.0.83.11-1.vz7.x86_64 (@openvz-updates)
       vztt = 7.0.83.11-1.vz7
    Available: vztt-7.0.83.5-2.vz7.x86_64 (openvz-os)
       vztt = 7.0.83.5-2.vz7
    Available: vztt-7.0.83.7-1.vz7.x86_64 (openvz-updates)
       vztt = 7.0.83.7-1.vz7
You could try using --skip-broken to work around the problem
You could try running: rpm -Va --nofiles --nodigest
```
