This is a stunning (though sadly unsurprising) quality control failure on the part of Virtuozzo / OpenVZ.

Try this on your affected server:

`rpm -hUv --force`

`https://download.openvz.org/virtuozzo/releases/openvz-7.0.20-147/x86\_64/os/Packages/v/vcmmd-8.0.77-1.vz7.noarch.rpm`

After that you may need to restart the vcmmd service.
