Hey there,
official Feedback from Virtuozzo:

Quote:Hello Andreas,

Here is an updated workaround for the issue that will avoid network downtime:

- 1) Download the new network-scripts package from the devel repository
https://repo.almalinux.org/almalinux/9.4/devel/x86_64/os/Packages/network-scripts-10.11.6-1.el9.x86_64.rpm
- 2) Run `dnf update ./network-scripts-10.11.6-1.el9.x86_64.rpm` . This updates `initscripts-10.11.6-1.el9.x86_64` and `network-scripts-10.11.6-1.el9.x86_64`
- 3) After that run `dnf update`. This way you avoid the error "Problem: cannot install both `initscripts-10.11.6-1.el9.x86_64` from baseos and `initscripts-10.11.5-1.el9.x86_64` from @System"
- 4) The CT should update to 9.4 without problems

I'll mark this ticket as resolved. Meanwhile our Devs are working on a long term solution for this problem with internal ID PSBM-156563. The issue will be fixed in upcoming releases of VHS.
In case of any further issues, questions or concerns don't hesitate to contact us.

Kind regards,
xxx
Senior Cloud Engineer

bye from Austria
Andreas
