Coincidentally I just came upon your AlmaLinux 9 forum post on that topic today, and yes we
have! I have a bug report in about it here: https://bugs.openvz.org/browse/OVZ-7496?filter=-2

I commented on your AL9 forum post earlier today, but it's in review.
I meant to reply to you earlier, but thank you for this! I cheered out loud when I read your reply,
it's great to know we're not the only ones and that there's hopefully a fix coming from the official
source.

Also thanks for your tips (re: systemctl restart dbus systemd-logind), I'll experiment with that and
see if we can't get around the reboot, as we have quite a few Alma VPSs that need regreSSHion
patch.

Finally, thanks Futureweb for getting the bug report created and sharing the official workaround!
