Subject: *SOLVED* fastboot?
Posted by John Kelly on Fri, 18 Aug 2006 14:40:58 GMT

I made a template for a minimal custom distro I use, and fixed up ip and host scripts for it.

It works great. Thanks OpenVZ!

But there is one little thing. After booting, I have a "fastboot" file in the / directory, and I don't know why. Searching the forum for "fastboot" returned nothing.

Why do I get this "fastboot" file in the / directory when booting my custom distro? It does not happen when I boot a debian template.
