Hi,

... the solution is printed on the "screen"

```
>host-node:~# vzyum 106 install apache
```

```
>ERROR: No such OS template: install
```

Have you install the template metadata from "http://download.openvz.org/template/metadata/" ?

@foxxfile: depends on which fedora core you have installed!

@hm2k: centos4 ->"http://download.openvz.org/template/metadata/centos-4/"
