Subject: Re: [ckrm-tech] [RFC][PATCH] UBC: user resource beancounters Posted by Alan Cox on Thu, 24 Aug 2006 10:49:06 GMT View Forum Message <> Reply to Message

Ar Mer, 2006-08-23 am 19:04 -0700, ysgrifennodd Chandra Seetharaman: > > A single centralized structure that has fields that are mostly used by > > every one should be okay I think. > > You mean to say definition like > > struct user_beancounter { > fields;/* fields that exists now */ > > int kmemsize_ctlr_info1; > char *kmemsize_ctlr_info2; > > char *oomquar ctlr info1; > char *oomguar_ctlr_info2; > > /* and so on */ > } > > is the right thing to do ? even though oomguar controller doesn't care > about kmemsize_ctlr_info* etc., All you need is struct wombat controller {

```
struct user_beancounter counter;
void (*wombat_pest_control)(struct wombat *w);
atomic_t wombat_population;
int (*wombat_destructor)(struct wombat *w);
};
```

and just embed the counter in whatever you are controlling. The point of the beancounters themselves is to be *SIMPLE*. It's unfortunate that some folk seem obsessed with extending them for a million theoretical projects rather than getting them in and working and then extending them for real projects. Please lets not have another EVMS.

Alan
