Subject: *SOLVED* Bridged Network - Same IP range than host.
Posted by pivert on Fri, 25 Aug 2006 08:47:17 GMT

Hi,

I need my guests to be in the same IP range than my host OS.
I tried with bridging my eth0 on my host to vnet0, but after that I cannot start my guests and/or add an IP address to them.

How can I bridge my eth0 on my host with the venet0 interface ?

I didn't find any clear answer in the docs and/or in the forums.

Regards,
