Hello,

Please provide the following info:

- 1) kernel version (uname -a)
- 2) host node network routing table (ip r l)
- 3) VPS network routing table (ip r l)
- 4) VPS network interfaces (ip a l)
- 5) host node nat table (iptables -t nat -L)
- 6) VPS nat table (iptables -t nat -L)

and may be something else, as this issue seems to be a misconfig

--

Thanks,

Dmitry.
