
Subject: [PATCH 2/7] BC: kconfig
Posted by [dev](#) on Tue, 29 Aug 2006 14:48:19 GMT
[View Forum Message](#) <> [Reply to Message](#)

Add kernel/bc/Kconfig file with BC options and
include it into arch Kconfigs

+    bool "Enable resource accounting/control"
+    default n
+    help
+
+    When Y this option provides accounting and allows to configure
+    limits for user's consumption of exhaustible system resources.
+    The most important resource controlled by this patch is unswappable
+    memory (either mlock'ed or used by internal kernel structures and
+    buffers). The main goal of this patch is to protect processes
+    from running short of important resources because of an accidental
+    misbehavior of processes or malicious activity aiming to ``kill"
```

- + the system. It's worth to mention that resource limits configured
- + by `setrlimit(2)` do not give an acceptable level of protection
- + because they cover only small fraction of resources and work on a
- + per-process basis. Per-process accounting doesn't prevent malicious
- + users from spawning a lot of resource-consuming processes.
