Mhh.. Sorry,

I used the stage3 2006.0 for the 777.

So I downloaded the stage3 again and made an other vm 701.

And this time, it works. I don't know the reason.

```
serveur private # ls -l 701/stage3-i686-2006.0.tar.bz2
```

```
-rw-r--r-- 1 root root 104949773 2006-08-29 22:08 701/stage3-i686-2006.0.tar.bz2
```

```
serveur private # ls -l 777/stage3-i686-2006.0.tar.bz2
```

```
-rw-r--r-- 1 root root 104949773 2006-08-27 23:38 777/stage3-i686-2006.0.tar.bz2
```

Really sorry for such an annoyance... I don't know what I miss in the 777vm ?!

I remade all the howto on the 777vm, but it still doesn't work.

However simply renaming the folder allowed me to start it :

```
serveur lib # vzctl start 777
```

```
Starting VPS ...
```

```
vzquota : (error) Quota on syscall for 777: No such file or directory
```

```
vzquota on failed [3]
```

```
serveur lib # cd ..
```

```
serveur 777 # cd ..
```

```
serveur private # ls
```

```
101 701 702 777
```

```
serveur private # mv 777 703
```

```
serveur private # vzctl set 703 --applyconfig vps.basic --save
```

```
Saved parameters for VPS 703
```

```
serveur private # vzctl start 703
```

```
Warning: distribution not specified default used /etc/vz/dists/default
```

```
Starting VPS ...
```

```
Initializing quota ...
```

```
VPS is mounted
```

```
Setting CPU units: 1000
```

```
VPS start in progress...
```

```
serveur private #
```

Regards,
