Hi!

The problem is I now have three VPS's with WHM locked into a "First time you ran this" cycle. The very first install even has the "News server" error I've seen before...the other two do not have this problem.

I'm not finding much terribly useful in the logs..so..I'm going to run ./upcp and log it this time.

Just for the heck of it..I guess I'll run ./fixndc.new just to see if that helps the sitch.

Bryon
