---

As you may know, the CentOS project released version 4.4 today. Being the adventurous type, I upgraded one of my OpenVZ machines... both the host machine as well as some CentOS VPSes... from 4.3 to 4.4... without incident.

Don't forget to modify your grub.conf if needed... to make sure the OpenVZ kernel is still the default after the upgrade.

Your milage may vary.

I also updated my centos-4 template cache with:

```
vzpkgcache -f centos-4
```

..and that seems to be updating but I haven't installed a new VPS from it yet.
