i think your problem is, that you dont make a direct connection to your VE. try to get putty.exe from  http://www.chiark.greenend.org.uk/~sgtatham/putty/download.h tml.
its a ssh-client for windows where you can enable X-forewarding in the options.
so you need to connect directly to the VE without connecting to your host-server an then make another connection to your VE.

greetings,
mario.
