Subject: smtp port
Posted by youp on Tue, 05 Sep 2006 19:26:34 GMT

my vps's don't contact all distant port smtp (25) :

-bash-3.00# telnet 69.64.46.7 25
Trying 69.64.46.7...

-> other adress does not work ...

-bash-3.00# telnet 69.64.46.7 80
Trying 69.64.46.7...
Connected to 69.64.46.7.
Escape character is '^]'.
-bash-3.00# telnet 69.64.46.7 443
Trying 69.64.46.7...
Connected to 69.64.46.7.
Escape character is '^]'.

-> other port work perfect , iptable is not loaded , and on harware node the command work fine
???

how to check if is it a misconfiguration ?

BR
