chinaman wrote on Wed, 06 September 2006 07:40Pls. let me doublechek if I am clear with your suggestion:

Let's say I am using 3 Networks on one physical NIC. I would like to have follwing configuration:

HW: NET1
VPS1: NET1, NET2
VPS2: NET2, NET3
...

Is this possible by using bridged eth ?

Yes, it is possible to create such configuration with veth devices and bridge.

1. VPS1: create 2 veth devices with IP addresses from NET1 and NET2
2. VPS2: create 2 veth devices with IP addresses from NET2 and NET3
3. create bridge on HW node and add 4 veth devices and eth0 device in it, assign IP address from NET1 to created bridge
