Just so there's no confusion... this is the currently loaded kernel:

2.6.17.5-HN-2.3-P4 #1 SMP Sat Jul 15 09:55:04 EDT 2006 i686 i686 i386 GNU/Linux

And here's the contents of modprobe.conf

```
alias eth1 8139too
```

(which looks good to me!)

What's next?
