According to " <http://openvz.org/news/updates/rhel4-kernel-2.6.9-023stab016.2>" kernel 2.6.9-023stab016.2 has the same functionality and feature set as base RHEL4u4 beta kernel (2.6.9-39.EL).

The last stable kernel of RedHat 4 is kernel-2.6.9-42.0.2. What regularity you will update kernel of RedHat with openvz code?

Thanks

Pepe
