Hello,

Check your:
/etc/yum.repos.d/CentOS-Base.repo

You should have something like that:

```
[code]
# CentOS-Base.repo
#
# This file uses a new mirrorlist system developed by Lance Davis for CentOS.
# The mirror system uses the connecting IP address of the client and the
# update status of each mirror to pick mirrors that are updated to and
# geographically close to the client. You should use this for CentOS updates
# unless you are manually picking other mirrors.
#
# If the mirrorlist= does not work for you, as a fall back you can try the
# remarked out baseurl= line instead.
#
#[base]
name=CentOS-$releasever - Base
mirrorlist= http://mirrorlist.centos.org/?release=$releasever&arch=$basearch&repo=os
#baseurl=http://mirror.centos.org/centos/$releasever/os/$basearch/
gpgcheck=1
gpgkey=http://mirror.centos.org/centos/RPM-GPG-KEY-centos4

#released updates
[update]
name=CentOS-$releasever - Updates
mirrorlist= http://mirrorlist.centos.org/?release=$releasever&arch=$basearch&repo=updates
#baseurl= http://mirror.centos.org/centos/$releasever/updates/$basearch/
gpgcheck=1
gpgkey=http://mirror.centos.org/centos/RPM-GPG-KEY-centos4

#packages used/produced in the build but not released
[addons]
name=CentOS-$releasever - Addons
mirrorlist= http://mirrorlist.centos.org/?release=$releasever&arch=$basearch&repo=addons
#baseurl= http://mirror.centos.org/centos/$releasever/addons/$basearch /
gpgcheck=1
gpgkey=http://mirror.centos.org/centos/RPM-GPG-KEY-centos4

#additional packages that may be useful
```

```
[extras]
name=CentOS-$releasever - Extras
mirrorlist= http://mirrorlist.centos.org/?release=$releasever&arch=$ basearch&repo=extras
#baseurl= http://mirror.centos.org/centos/$releasever/extras/$basearch /
gpgcheck=1
gpgkey=http://mirror.centos.org/centos/RPM-GPG-KEY-centos4

#additional packages that extend functionality of existing packages
[centosplus]
name=CentOS-$releasever - Plus
mirrorlist= http://mirrorlist.centos.org/?release=$releasever&arch=$ basearch&repo=centosplus
#baseurl= http://mirror.centos.org/centos/$releasever/centosplus/$base arch/
gpgcheck=1
enabled=0
gpgkey=http://mirror.centos.org/centos/RPM-GPG-KEY-centos4

#contrib - packages by Centos Users
[contrib]
name=CentOS-$releasever - Contrib
mirrorlist= http://mirrorlist.centos.org/?release=$releasever&arch=$ basearch&repo=contrib
#baseurl= http://mirror.centos.org/centos/$releasever/contrib/$basearc h/
gpgcheck=1
enabled=0
gpgkey=http://mirror.centos.org/centos/RPM-GPG-KEY-centos4
[/quote]
```

Use mirrorlist instead baseurl to avoid offline mirrors.

Regards,
