Subject: *SOLVED* Shared vps files
Posted by dagr on Mon, 11 Sep 2006 14:14:57 GMT

I know that in vserver project there is such thing like sharing files between different vps. Say you need common dirs like /bin /sbin in every vps - to save disk space you can make it sharable. Default centos vps takes 300 Mb which is not good in case of 100 VPS. Is there similar thing in openvz ?
