You may set any value from 100 up to 800 Mb for the first one and
200-900Mb for
the second. In case of no other groups first will receive its 100Mb for
sure and
so does the second. If there are other groups - their guarantees should
be concerned.

There's no "everyone else" here - we're talking about a "static" case.
When new group arrives we need to recalculate guarantees as you said.
And here's my next question - what to do if the new guarantee would become
lower than current amount of unreclaimable memory in BC?
