Dev,

the mandriva patch (http://bugme.osdl.org/attachment.cgi?id=6133&action=view) applied perfectly against an ovz patched 2.6.8 kernel. The System also seems to recognize the sata controller as well as the attached harddisks.

However it immediately panics after starting up the raid which is, i believe, related to some sillyness on my end.

If i can get the box to boot tomorrow i'll get back to you lot within the next few days.

Thanks a lot!
