I am trying to find out a few things.

1. my vps servers that is going to be running cpanel will have mutiple Ips do i have to add each 1 to the VE that the cpanel is installed on.
 2. the resolv.conf if that file is replaced each time the vps is unmounted and remounted is there anyway that it can e made once i install cpanel that that file isn't changed and the ips i added to the cpanel install are not changed either?
