Subject: Re: vzctl stop failed: Unable to stop VPS, operation timed out
Posted by demark on Thu, 14 Sep 2006 13:32:33 GMT

hi,

i used the standard debian 3.1 template, as downloaded from openvz.org; the vps contains "halt".

what happens is that i execute vzctl stop XX, and vzctl timeouts. it does kill most of the processes (just leaving 3 running, other times it kills all of them). for example, vzlist shows:

```
    17      0 running          vsrv17
```

the --fast option didn't help either
