so you run Gentoo inside VPS yeah?

the problem seems to be in your initscripts, which didn't mount /proc on VPS start and didn't create /dev/ptyX entries for terminal devices.

Looks like the only process in your VPS is init, strange...

kir@ who is in charge of Gentoo will be available after Jan 7 only, but I can check what's wrong with your VPS if you provide me the credentials in private email.

Kirill
