Hello,

the modules are loaded:

```
[root@icmnms ~]# lsmod | grep gre  
ip_gre          10912  0  
[root@icmnms ~]#
```

How can I see what device is under /dev, any network interface? /dev/tunel0 does not exist.....
/dev/eth0 doesn't to....

Thx!
