I just downloaded your file and while it's a nice start, there seem to be a few bugs.

First off, the CPU usage doesn't work at all. It shows 100% idle no matter what is happening.

Next, free memory seems to be displaying KB, not MB (used RAM appear to be correct) and that makes the percentages break and always show 100% free.

Keep up the work though, as this will be a pretty useful app.
