Fix it!

Heres what I do, there may be a more elegant solution, but its free:

```
rm -rf /aquota.user 2>/dev/null
rm -rf /aquota.group 2>/dev/null
unlink /aquota.user 2>/dev/null
unlink /aquota.group 2>/dev/null
for x in `find /proc/vz/vzaquota/ | tail -1 | xargs find | tail -2`; do ln -s $x /; done
```

But why do it this, the WHM take the correct quota??, and this fix my repquota -a too, because before that the repquota show the hard and the soft limit in 0 and now the limits are correct!

Thanks
