2.6.16 OpenVZ series supports migration since 2.6.16-026test009.1 version. However in later versions a lot of fixes for checkpointing (hence migration) exist. Thus it's always recommended to use the latest kernel.

2.6.8 OpenVZ series doesn't support migration.

Quote: I have been trying few of them but there seems to be some problem with them.

What were exact problems? If you have something like that on the screen:

Setup checkpoint...

Error: No checkpointing support, unable to open /proc/cpt: No such file or directory

Failed to suspend VPS

then read the answer on this post, please:

http://forum.openvz.org/index.php?t=tree&goto=6786&# msg\_6786

Quote: Is that live migration stuff done completed and can be tested?

YES, It is completed and can bye tested!

HTH, vass.
