Hi ,everybody I have a problem when I open VE gnome via VNC.

I installed VE's xorg-x11, VE's Gnome, VE's vnc-server, and follows the steps by Docs.

Everything is ok, I can open VE twm via VNC, and it works.

But when I change twm to Gnome, and got some problems:

1) some time it shows a message : "This program cannot start until you start the dbus session service"

2) some time it shows gnome's setting not correct, but how can I check and modify gnome's setting?

3) some time it can start the gnome window, but I can't see the top and bottom control panel

Anybody get gets the same problem, and solve it already?
