Hi, my test server running 2.6.16 with patch 2.6.16-026test018.1 has crashed twice, both times with this in the messages file:

crash #1:
Sep 27 17:00:29 server kernel: Fatal resource shortage: kmemsize, UB 0.
[DEAD]

crash #2:
Sep 28 03:00:37 server kernel: Fatal resource shortage: kmemsize, UB 0.
Sep 28 03:05:54 server last message repeated 4 times
Sep 28 03:05:54 server kernel: Unable to load interpreter /lib/ld-linux.so.2
[DEAD]

For the second one, I managed to get a screen capture of the console but its only the end of the panic, I am not sure if it helps any.

Have I presented any information to figure out what the problem is?

Harold
