I am running CentOS on the hardware node with OpenVZ, running a Fedora VPS.

I am trying to run software that uses Java, and I keep getting the following error:

Quote:-bash-3.00# /usr/java/jre1.5.0_06/bin/java -version

Error occurred during initialization of VM

Could not reserve enough space for object heap

Could not create the Java virtual machine.

How can I fix this?

Thanks.
