Subject: what sripts runs when you vzctl into a ve?
Posted by vmvmvm on Sat, 07 Jan 2006 05:33:22 GMT

Hi,

Is there a particular script that runs and sets the environment, etc. for the shell when you vzctl into a server.

I notice that when I'm in the hardware node I have my regular bash enviroment but when I vzctl enter into a ve it is all set to blank:

bash-3.00# env
TERM=screen
PWD=/
SHLVL=1
HOME=/
HISTFILE=/dev/null
_=/bin/env

Can I edit this to set a preferred set of vars?

Thanks!
