Subject: Distro with 2.4 kernel
Posted by tgasoft on Wed, 04 Oct 2006 08:33:26 GMT

Currently I'm using distro with kernel 2.4, it's ASPLinux Server II (which is RHEL 3 with some minor updates). Due to kernel versions difference, I can't use vz on it (or it's not so easy as for 2.6 based distro). Is there any workaround for such situations? Target system is used as company web-server with many virtual servers etc, and it will be quite nice to use vz there. Any suggestions?
