Hi,

I have just updated one of my guest vz systems to the latest centos 4.4 via yum and then rebooted the vz instance. However I now can not get back into the vz instance. Either via ssh as i was before, telnet or vz enter.

Looking at the updates one was for glibc so i am wondering if this is causing a conflict and that the guest system is now not coming up properly.

I have also updated the host server to CentOS 4.4 via yum but have not yet rebooted, so it is using kernel 2.6.8-022stab078.14.

Any ideas on how to solve this problem and get the guest booting again?

I can't yet reboot do to people using the other virtual servers.

Regards

Mark
