Hello

thanks for your help

i wish i could do that but its a dedicated server on a DC i cannot connect a serial cable or anything to it as i only have ssh access to it

but what is the benefit of elevator=cfq what does that do i tried searching the forums nobody has talked about it

also

the ram , memory limitations are obscure to me in openvz

could you please provide a sample configuration file to use for a server in order to gurantee 128 Mb ram with max of 256 MB of ram and 333 MHZ of cpu please
