I am getting error whenever I try to dump mysql on VPS
[root@99 init.d]# mysqldump -u root -p megablog_mega > megablog_blog.sql
> Enter password:
> mysqldump: Got error: 1017: Can't find file:
> './megablog_mega/wp_63_post2cat.frm' (errno: 24) when using LOCK TABLES

All resources on VPS are set to unlimited.
Thanks.
