Hello

/etc/my.cnf is blank there are no values

my.cnf details

[mysqld]

datadir=/var/lib/mysql

socket=/var/lib/mysql/mysql.sock

Default to using old password format for compatibility with mysql 3.x

clients (those using the mysqlclient10 compatibility package).

old_passwords=1

[mysql.server]

user=mysql

basedir=/var/lib

[mysqld_safe]

err-log=/var/log/mysql.log

pid-file=/var/run/mysql/mysql.pid

how can I increase value in my.cnf or UBC for the same.

Thanks
