Hi

I am struggling with a strange VPS startup problem after having upgraded my VPS gentoo system. I have checked all steps listed in the wiki page "Gentoo template creation" Vzlist says status "mounted" instead of "running" and Strace -f gives:

```
[pid 10966] stat64("/etc/runlevels/default/net.venet0",
{st_mode=S_IFREG|0755, st_size=30341, ...}) = 0
[pid 10966] rt_sigprocmask(SIG_SETMASK, [], NULL, 8) = 0
[pid 10966] rt_sigprocmask(SIG_SETMASK, [], NULL, 8) = 0
[pid 10966] rt_sigprocmask(SIG_BLOCK, NULL, [], 8) = 0
[pid 10966] rt_sigprocmask(SIG_BLOCK, NULL, [], 8) = 0
[pid 10966] stat64("/etc/conf.d", {st_mode=S_IFDIR|0755, st_size=4096,
...}) = 0
[pid 10966] rt_sigprocmask(SIG_SETMASK, [], NULL, 8) = 0
[pid 10966] stat64(".", {st_mode=S_IFDIR|0755, st_size=4096, ...}) = 0
[pid 10966] stat64("/bin/grep", {st_mode=S_IFREG|0755, st_size=73660,
...}) = 0
[pid 10966] stat64("/bin/grep", {st_mode=S_IFREG|0755, st_size=73660,
...}) = 0
[pid 10966] rt_sigprocmask(SIG_BLOCK, [INT CHLD], [], 8) = 0
[pid 10966] fork(Process 11991 attached
) = 11991
[tcb table full]
Process 10959 resumed
Process 10965 detached
Process 10963 detached
Process 10966 detached
Process 11991 detached
bash: line 118: 11991 Killed                 grep -E "^\$name=(.*\")"
$file >/dev/null 2>&1
```

Thanks for your help.
