Ok, I have altered my mem config a little. With this test below I do not get any conflicts anymore.

```
vzctl set 134148 --kmemsize 4915200:5242880 --privvmpages 98304:107150 --vmguarpages  
98304:2147483647 --numproc 130 --tcprcvbuf 638976:1048576 --dgramrcvbuf 264192 --save
```

WHERE 134148 is the VPSID
