Subject: Re: Install problems on dual opteron (64 bits), CentOS 4.4
Posted by fgomes on Fri, 13 Oct 2006 13:15:23 GMT

I've somehow turned arround this problem changing to the install methode described in the Quick install guide in the wiki, using yum, and then installed all the .rpm necessary to have yum in each VE (I built a new cache for CentOS minimal including yum, and then I'm using this cache to built every VE). It is working, but it is not a clean solution.
If you need any details about it, please ask me, I'll post here all that I can retreive from my notes.
