Hello,

In response to your recommendation:

Quote:You need to comment out network setup in /etc/init.d/vz:

sed -i 's/\(.*setup_net\)$/#\1/' /etc/init.d/vz
/etc/init.d/vz restart

If you don't want restart service vz, then:
stop your VPSs,
ifconfig down venet0,
rmmod vznetdev

Correct me if I'm wrong, but it looks like the above solution removes the venet0 interface for all
VEs, whereas I only want to remove venet0 from VE 4 (now using the eth1 interface), but leave
the venet0 interface functioning on VEs 1, 2 and 3.

Thank you.
