Subject: VENET, VETH + SNAT
Posted by chinaman on Wed, 18 Oct 2006 07:10:07 GMT

Hello,

due to your help last time I've got the configuration using VETH devices running with multiple IPs inside VE.

Because some VE's running just several different services inside (different ports) I am thinking I could save some Public IPs using SNAT and private IPs inside some VEs.

I tried the setup as described in Howto, but i am running into the same problem as last time using Venet. The latency is much different inside VE and HW. Ping google around 200ms difference!

Is this a known problem or is there a solution about it?

Is it possible to use Veth and SNAT?

Sorry, but I am new with SNAT and IPTABLES.

Thanks. Best regards
Thomas
