The ovz-kernel haven't enabled the Framebuffer DEVICE in their  
kernel-config ...

Show Framebuffer (CONFIG\_FB) in the kernel-config of Mandriva and Fedora :

```
# grep CONFIG_FB <kernel_config_of_mandriva_or_fedora>
```

and enable it , like "make menuconfig" , in your ovzkernel-config and  
reBuild your kernel!

Regards,  
Thorsten
