1. I don't remembemer... in what kernel version was Sun T2000 support added? what kernel are you running? i.e. the question is whether mainstream 2.6.16 works on it or not

2. I will be happy to get an ssh access (I don't even need a root).

And make ovzkernel and ovz tools compilable. I will provide a patches for you then and you will be able to check it.
