chinaman wrote on Fri, 20 October 2006 06:26 Would it be possible to use venet instead of veth with SNAT and private IPs? What would be the setup to do this? Routing? I would like to try the difference in speed of both ways.

Yes, it is possible to configure SNAT using venet, just add private IP to your VPS with help of vzctl (route to this VPS via venet0 will be added by vzctl) and add the same SNAT rule. That's all.

It would be interesting to see results of your testing. Please post them and test procedure you used to obtain them.
