Guess I didn't read closely enough on the kernel page :(Thanks
I ran into a little snag:

```
# rpm -ivh ovzkernel-smp-2.6.8-022stab061.1.i686.rpm
warning: ovzkernel-smp-2.6.8-022stab061.1.i686.rpm: V3 DSA signature: NOKEY,
key ID a7a1d4b6
error: Failed dependencies:
    vzkernel-install is needed by ovzkernel-smp-2.6.8-022stab061.1.i686
```

So do I have to install the regular kernel first and then the SMP kernel??

SMP kernel if you want both CPUs to be visible.

Kirill
