iptables appears not to be working on my VPS or I might have the config incorrect.

Config:

```
vzctl set SID --iptables iptable_filter --iptables ipt_length --iptables ipt_limit --iptables  
iptable_mangle --iptables ipt_REJECT --save
```

However, I get the following error reports:

```
iptables v1.2.11: can't initialize iptables table `filter': iptables who? (do you need to insmod?)  
Perhaps iptables or your kernel needs to be upgraded.
```
