I'm trying to use the checkpoint/restart functionality of OpenVZ. Unfortunately, here's what I get:

```
#vzctl chkpnt 110 --dumpfile test
```

```
Setting up checkpoint...
```

```
  suspend...
```

```
  dump...
```

```
Can not dump VE: Invalid argument
```

```
page without mapping at 0057b000@75528
```

```
dump_one_vma: funkey page
```

```
Checkpointing failed
```

I'm using vzctl version 3.0.12 with kernel version 2.6.16-1.2133\_FC5.026test015

Any thoughts?

JP
